

Optum Insights – BI Dashboard

1. What Optum Does

Optum is a healthcare services and technology company that uses healthcare data, analytics and technology to help **health plans, healthcare providers and other healthcare organizations** improve cost, quality, revenue and operational efficiency.

Key business areas include:

- Healthcare Analytics
 - Claims & Payment Integrity
 - Revenue Cycle Management
 - Provider Performance
 - Healthcare Cost Optimization
 - Risk & Quality Analytics
-

2. Proposed Dashboard

Healthcare Performance & Opportunity Dashboard

The dashboard should help leadership understand three things:

Where are we winning?

- Areas with lower costs
- High-performing providers
- Savings achieved
- Improved operational performance

Where are we losing?

- High healthcare costs
- Claim denials
- Payment leakage
- High-cost providers
- Revenue leakage
- Excess utilization

Where are the opportunities?

- Potential cost savings
- Revenue recovery
- Payment recovery
- Utilization reduction
- Provider performance improvement

The key idea is:

Data → Insight → Opportunity → Action

3. Main Dashboard Pages

Executive Dashboard

- Total Spend
- Revenue
- Savings Achieved
- Potential Savings
- ROI
- Cost Trend

Cost & Savings

- Cost by Provider
- Cost by Procedure
- Cost by Region
- Actual vs Benchmark
- Savings Opportunity

Provider Performance

- Provider Cost
- Cost per Episode
- Quality Score
- Utilization
- Benchmark Variance

Payment & Revenue

- Claims Volume

- Denial Rate
- Payment Accuracy
- Overpayment
- Recovery Amount
- Revenue Leakage

Opportunity Explorer

Show the **top potential savings/revenue opportunities** with drill-down to provider, procedure, region and claim level.

4. Key KPIs

Category	KPIs
Financial	Total Spend, Revenue, Margin, Savings, ROI
Claims	Claims Volume, Denial Rate, Clean Claim Rate
Provider	Cost/Case, Utilization, Quality Score
Payment	Payment Accuracy, Overpayment, Recovery
Revenue	Days in A/R, Collection Rate, Revenue Leakage
Opportunity	Potential Savings, Revenue Opportunity, Cost Avoidance

5. Key Business Value

The dashboard should not only answer "**What happened?**"

It should help answer:

Why did it happen?

Where is the problem?

How much is the potential opportunity?

For example:

Provider X costs 18% more than benchmark → 5,000 affected cases → **\$10M potential opportunity**

This makes the solution a **Healthcare Performance & Opportunity Intelligence Platform**, rather than just a standard Power BI reporting dashboard.
